All Seasons Weed Control

Fertilome All Seasons Weed Control is one of the greatest products we have ever sold here at the Green Haus. I can hear you now asking why?

Back in the old days we sold a crabgrass preventer that stopped weeds for about 60 days. Since the product only lasted 60 days we encouraged folks to apply it about April 15th every year. We also told them it only was effective for 60 days and if they wanted all summer long control they needed to reapply it the first part of June.

Well guess what? Very few of our customers would apply it April 15th and even fewer reapplied it in early June. Because of that many of our customers would come back in late summer and tell us they still had a few stickers in the yard. We then would sell them a bottle of post emergent spray to kill the stickers in their lawn.

Today, thankfully we have the new improved *Fertilome All Seasons Weed Control*. This new improved product is effective for about 6 months! So you can apply anytime you want in March and April and do a great job of stopping weeds from germinating in your lawn.

We actually have quite a few folks who come in during the spring and apply it and then turn around and reapply it in August or September to get 12 months of protection from weeds!

Guess where my sales of post emergent weed sprays in late summer to control stickers has gone? Yes, you are right they have fallen off considerably. That is the best indicator we have of *Fertilome All Seasons Weed Control* being so successful.

Fertilome All Seasons Weed Control is not the least expensive product sold in the market place today, but if you want something that you know works and is what all other crabgrass preventers are compared to then this one is for you. We grow our own and that's the difference.
